

IN THE CLAIMS:

Please amend the claims as follows:

1. (amended) A portable computer unit comprising:

- (a) a portable computer housing;
- (b) computer means positioned in said housing;
- (c) flat panel display means interfaced to said computer means;
- (d) a transparent [membrane switch] data entry array interfaced to said computer means and overlayed on said display means; and
- (e) closure panel means having said display means and said array mounted thereon on one side and reversibly hingedly connected to said housing in such a manner as to enable said closure panel means to be pivotally positioned in a first position in overlying relation to said housing with said display means facing away from said housing for use of said [switch] data entry array and alternatively to be pivotally positioned in a second position in overlying relation to said housing with said display means facing toward said housing, said computer housing means and said closure panel means incorporating electrical connecting means adapted to electrically connect said display means and said

[membrane switch] data entry array to said computer means in both said first and said second positions.

12. (amended) A portable computer unit comprising:

- (a) a portable computer housing;
- (b) computer means positioned in said housing;
- (c) a keyboard mounted on said housing and interfaced to said computer means;
- (d) a computer unit closure panel hingedly connected to said housing and pivotal relative thereto;
- (e) flat panel display means interfaced to said computer means and mounted on a first side of said closure panel;
- (f) a transparent [membrane switch] data entry array interfaced to said computer means and overlayed on said display means on said first side of said closure panel; and
- (g) reversible hinge means hingedly connecting said closure panel to said housing and electrical connecting means interfacing said display means and said array to said computer means, said hinge means and connecting means cooperating in such a manner as to enable said closure panel to be pivotally positioned in a first position with said display means generally facing said keyboard

F  
to facilitate use of said unit by operation of said keyboard while viewing said display means and, alternatively, to enable pivotally positioning said closure panel in a second position in overlying relation to said housing with said display means and said array facing away from said housing to facilitate use of said unit by operation of said array while viewing said display means, and such that said display means and said [membrane switch] data entry array are electrically connected to said computer means in both said first and said second positions.

D 3  
P 1 20. (Amended) A portable computer unit comprising:

D 3  
P 1 (a) a portable computer housing;

D 3  
P 1 (b) computer means positioned in said housing;

D 3  
P 1 (c) a plurality of key switches interfaced to said computer means and mounted on said housing;

D 3  
P 1 (d) flat panel display means interfaced to said computer means;

D 3  
P 1 (e) a transparent [membrane switch] data entry array interfaced to said computer means and overlayed on said display means; and

D 3  
P 1 (f) closure panel means having said display means and said array mounted thereon on an outer side and connected to
